

BLUE LANCE

New Feature Enhancements in LT Auditor+ Build 21 Release

- **LT Auditor+ Best Practices Panels**

Introducing a set of powerful dashboards that highlight network activity captured with LT Auditor+, encapsulated into intelligent, easy to use portals that assist organizations with improving Cybersecurity practices and hygiene.

- **Auditing of EMC – ISILON Network Attached Storage (NAS) devices**

Introducing new capability to audit and monitor ISILON NAS devices. LT Auditor+ can effectively handle monitoring of detailed file activity on petabytes of storage.

- **Auditing GPO Policy Preferences**

This release can now comprehensively audit changes to GPO Policy Preferences. Group Policy Preferences are a collection of Group Policy client-side extensions of administrative configuration choices deployed to desktops and servers in an Active Directory Domain.

BLUE LANCE

New Feature Enhancements in LT Auditor+ Build 21 Release

- **Enhanced Access Control to LT Auditor+ Consoles**

Build 21 release makes it faster and easier to grant permissions to access LT Auditor+ by allowing Active Directory groups to be added as authorized entities. Members inherit permissions configured for the group, making it a breeze to manage multiple users with common access needs and privileges. Nested grouping is also supported.

- **Enhanced Active Directory Auditing capability**

Complete support of Microsoft Server 2019 and capability to audit configurations such as User Passwords set to 'Never Expire' and 'Unconstrained Delegations' granted to computers on the network.

- **Enhanced Email Support**

Build 21 fully supports sending LT Auditor+ email messages in real time or via scheduled report to Office 365

- **SPLUNK Integration**

Build 21 has built in integration to Splunk. The LT Auditor+ App for Splunk can ingest data from LT Auditor+ and provides dashboards and portals to fully leverage audit data generated with LT Auditor+. service agents particularly on 64-bit processor Windows systems.
